Marine Corps Stock Number Processing

Informational Brief

Presented by:

Roger W. Simpson

Background

- 4/17/99 - Requirement:
“…….Establish a process to assign, store, maintain and distribute a unique Marine Corps Stock Number (MCSN) for items of supply which do not have a National Stock Number (NSN) and/or will never be assigned an NSN through the cataloging process.”

- 7/1/99 - Briefed LCMC and G3 of proposed implementation procedures

- 7/15/99 - Briefed all system POCs on proposed changes and SMRs were

Background (cont'd)

- Goal: Establish automated system processing procedures to sequentially assign a 13 digit item identification number.

- MCSN Structure:

FSC	NCB	RANDOM DIGITS		FSC	NCB	RANDOM DIGITS	
0000	07/08	000	0001	0000	09/10	000	0001

  - ➢ National Codification Bureau (NCB):
    - ❖ 07 - 08 Identifies temporary MCSN
    - ❖ 09 - 10 Identifies permanent MCSN
  - All existing data elements, ie. AAC, SoS, SAC, etc will remain as established

Approach

- Develop On-Line Screen for the user (LCMC) to obtain MCSN. For example, user will key in approximately 35 data elements. System will respond with MCSN
  - ➢MCSN will not be in FLIS
  - MCSN will be distributed to all USMC Legacy systems including the MHIF

Approach (cont'd)

- Implementation
  - Establish MCSN capability (Phase 1)
    8 Sept. 2000
  - Convert MCSN to alpha/numeric combination (Phase 2) Date Not Determined

Benefits of MCSN

- The Marine Corps Stock Number (MCSN) will improve support for the field units by:
  - * Diminishing the requirement to order by Part Number
  - * Improving the identification process on receipt and shipping of items including Out of Stores Initial Issue Provisioning
  - * Improved stocking and tracking of items via legacy systems such *as SASSY and ATLAS*
